

The benefits of building trials, focused on patients, delivered in their own community.

Catherine Jarvis
General Manager, Integrated Trial Solutions

Our Mission

**Bring trials closer to patients through
community-based clinical trials.**

Through in-home and at-site solutions, we
can make trials more efficient, more inclusive
and more accessible for all patients and for all
research sites around the world.

Challenges for clinical trials

MRN solutions are designed to address

On average, 20% of patients drop out of clinical trials.

Solution:

Make participation more convenient. Bring the trial closer to the patient, **run the trial at a local site and conduct visits in the home or other convenient location.**

Up to 50% of sites fail to recruit enough patients.

Solution:

Recruit from sites in the community that can deliver the right patients, have fewer competing trials and have additional support where required.

Only 25% of global trial participants are people of color.

Solution:

Remove barriers by bringing the trial to the patient. **Make participation easier and more accessible** by conducting visits in a convenient, trusted location, in their own community.

On average, recruitment is 32% of the overall trial budget.

Solution:

Accelerate overall trial timelines by building a more efficient trial. Speed up recruitment and improve retention through solutions that make participation easier and keep patients engaged.

Global Site Network

Discover untapped communities and increase trial access to more patients through our global Site Network.

We engage, empower and support a variety of community research sites, experienced, trial naïve, virtual, or primary care, **increasing site recruitment and retention of diverse patient populations and overall trial success.**

Each site in our network is supported with a **fully integrated and validated eClinical software system.**

Home Trial Support

Make participation easier through in-home trial delivery, bringing clinical trials to patients wherever they live, in the home or alternate location.

Making trials more flexible for patients **results in enhanced recruitment and enrolment and improved retention.**

Our MRN owned digital eSource system allows successful trial delivery in a patient's home and **seamless data collection in-home and at-site.**

MRN Solutions

Delivering research in-home and at-site

Integrating our solutions, tailored for each trial.

Our services are designed to accelerate clinical trials by addressing key challenges for each protocol. By **utilizing our Site Network, Home Trial Support, and technology together**, we can maximize the reach of each clinical trial into communities around the world and create a customized approach to **maximize trial speed and efficiency - getting your results faster.**

Supporting Patients

Delivering wherever patients live

Home Trial Support breaks down barriers to participation such as

- Travel burden due to the patient's disease state
- Travel & cost burden when they live far from site
- Taking time off work or finding childcare
- Reducing caregiver burden
- Reducing workload for complex protocols and providing more comfort.

Home Trial Support breaks down rate limiting barriers and creates more efficient trials

- Increasing recruitment rates
- Expanding geographical reach of sites
- Improving retention rates & compliance
- Getting better data, faster.

Make participation easier, more convenient and more accessible

Survey of 5,000 adults, willingness to travel for routine care⁶

All Adults:	20.4 miles
Age 65+:	18.1 miles
Hispanic Origin:	17.9 miles
Urban Resident:	17.6 miles

**Patients supported through
in-home trial delivery**

- The median distance of MRN patients: **64 miles**
- **Over 54% lived 125 - 620+ miles** from site
- ~12% of visits take place **outside of standard clinic hours**

A Global Network Of Sites

Gaining Access To Patients In Any Community

Our global network of 80+ sites and ongoing site support solutions remove barriers, alleviate site burden and increase patient access to clinical research sites around the globe.

Sites in our network **are trained and ready to run traditional and hybrid clinical trials** in a range of therapeutic areas.

All sites in **MRN's network have access to the training program, resource support and technology** to support their clinical research.

Benefits:

- Delivers quality & consistency across sites
- Comprehensive support program
- Trial naïve site training programs developing research ready sites
- Increasing capabilities at sites
- Patient recruitment management
- Managed patient visit schedules & project oversight

Diversity & Inclusion

By Bringing Trials To Patients

MRN's Solutions provide access to broader patient populations that support:

- Capturing broader demographic factors
- Mitigating non-participation due to socio-economic factors
- Overcoming language/cultural barriers
- Enabling subjects with care needs to participate more easily
- Broadening access to subjects with specific disease factors

The definition of 'diverse' is often very context and study specific. A 'diverse' group for one disease or type of study may be the opposite to that of another.

Design trials that can reach more patients in their own communities to efficiently increase recruitment, improve retention and speed up clinical trials in a cost-effective way.

Survey of 125 clinical trial professionals around the world³:

- **70%** have implemented some decentralized element in the last two years
- **58%** say decentralized trials are faster than traditional trials averaging just under 3 months to completion
- **71%** say decentralized trials are better for patient recruitment than traditional trials and **74%** for retention
- **81%** say decentralized trials cost about the same or have a lower overall cost than traditional trials.

Design trials that can reach more patients in their own communities to efficiently increase recruitment, improve retention and speed up clinical trials in a cost-effective way.

Case Study

Global Pharma Company
Phase 3
Polycystic Kidney Study
Recruitment was planned for 24 months

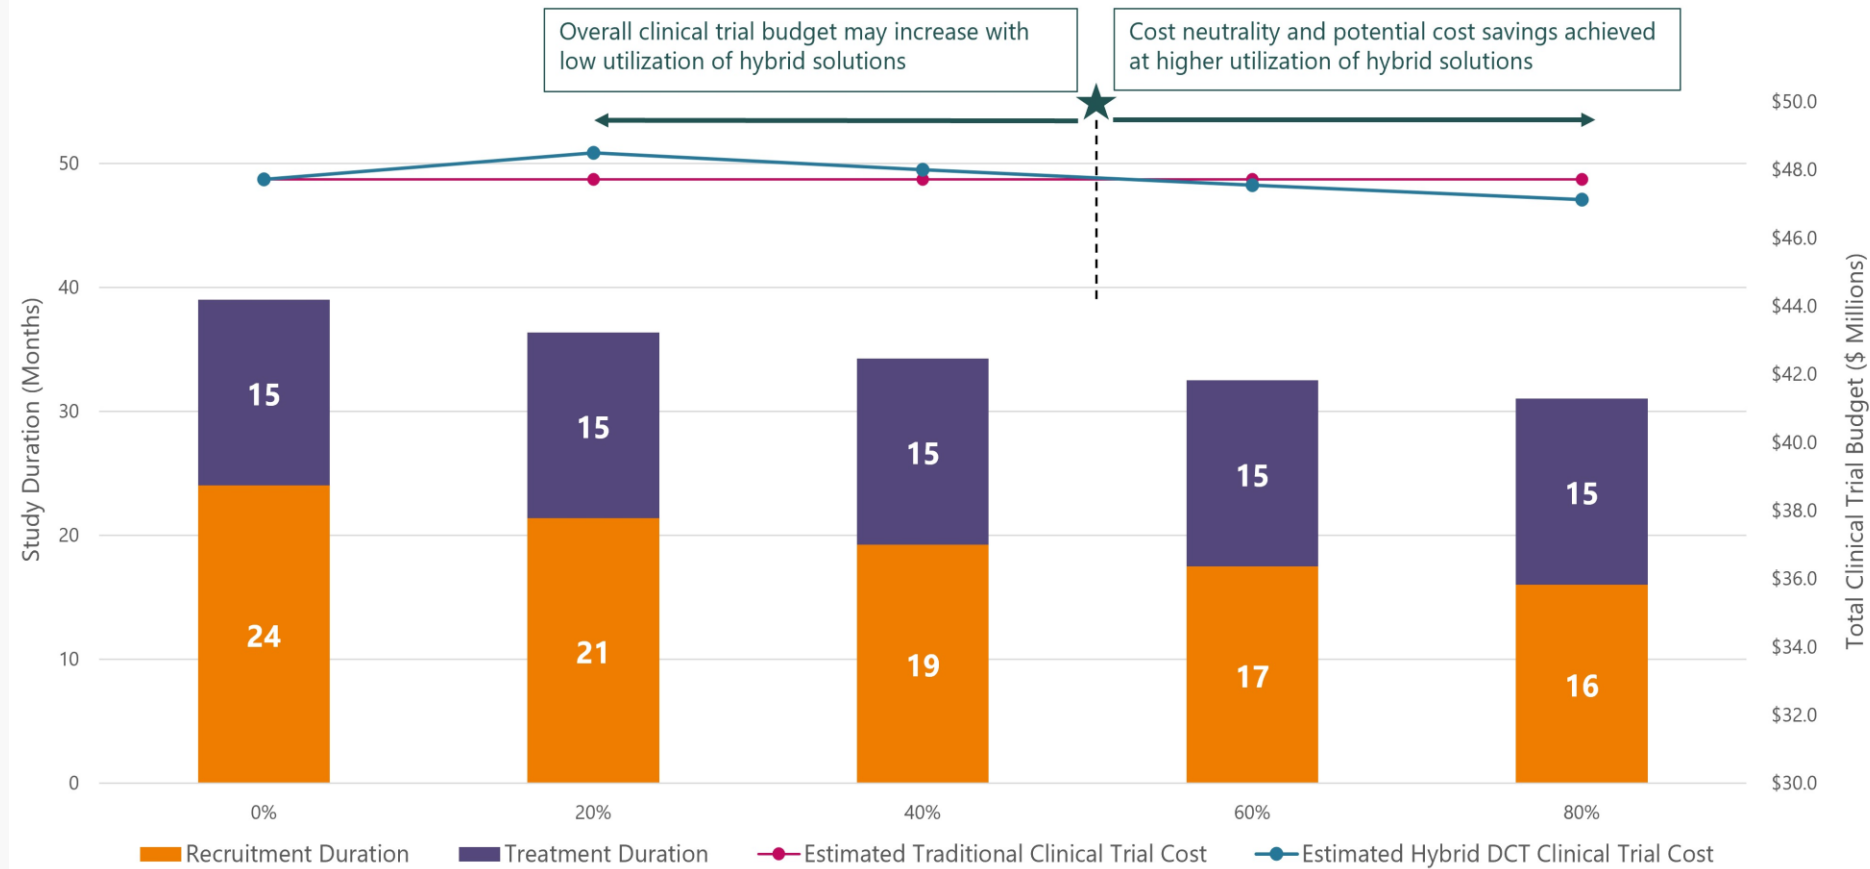

It was important to support their recruitment of rare disease patients

- Deployed Home Trial Support for 20% of patients on the trial
- HTS sites had 100% increase in recruitment per month per site
- Recruitment completed in 21 months

Uptake & Engagement

are critical to finding the ROI

- ✓ Successful design & start-up
- ✓ Detailed & collaborative project management
- ✓ Country & Site engagement
- ✓ Patients referred & supported
- ✓ Timelines reduced

Experience and Collaboration

Committed to patient and site success

18+

Years **experience**
delivering for patients,
sites and Sponsors

100+

Research sites in our
global network able to
run patient-centric trials.

112,000+

Home visits delivered
to **patients in their
own communities**

100+ Therapeutic Areas

Rare Disease

Pediatrics

Oncology

**Central
Nervous System**

Genetic

Metabolic

Immunology

Infectious Disease

**Hematological
Disorders**

And 100s more

Thank You!
